REAR SUSPENSION LOCATION INDEX

1 Rear shock absorber and coil spring
(See 02–14–2 REAR SHOCK ABSORBER AND
SPRING REMOVAL/INSTALLATION)

2 Rear shock absorber
(See 02–14–3 REAR SHOCK ABSORBER
INSPECTION)
(See 02–14–3 REAR SHOCK ABSORBER
DISPOSAL)

3 Rear stabilizer and stabilizer control link
(See 02–14–4 REAR STABILIZER REMOVAL/
INSTALLATION)
(See 02–14–4 STABILIZER CONTROL LINK
(REAR) INSPECTION)

4 Lateral link
(See 02–14–5 LATERAL LINK AND TRAILING
LINK REMOVAL/INSTALLATION)

5 Trailing link
(See 02–14–5 LATERAL LINK AND TRAILING
LINK REMOVAL/INSTALLATION)

6 Rear crossmember
(See 02–14–6 REAR CROSSMEMBER REMOVAL/
INSTALLATION)
Caution
- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and set it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.

1. For the 4SD, remove the rear seat belt. (See 08–11–2 REAR SEAT BELT REMOVAL/INSTALLATION.) For the 5HB, remove the trunk side trim. (See 09–17–15 TRUNK SIDE TRIM REMOVAL/INSTALLATION)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

Coil Spring Installation Note
1. Temporarily install the coil spring, upper spring seat and mounting rubber on the shock absorber so that the lower end of the coil spring is seated on the step of the lower spring seat.
2. Mark the coil spring, upper spring seat and mounting rubber for proper installation as shown in the figure. (The following figure shows how to install the right side. Install the left side symmetrically.)
3. Align the marks of the coil spring and upper spring seat rubber. Protect the coil spring and upper seat spring using a piece of cloth, then set the SSTs.
4. Compress the coil spring using the SSTs.
5. Install the lower spring seat rubber on the lower spring seat.
6. Install the shock absorber so that the lower end of the coil spring is seated on the step of the lower spring seat.
7. Align the marks of the mounting rubber and shock absorber.
8. Install the washer and piston rod nut, then remove the SSTs.

Piston rod nut tightening torque
55—67 N·m (5.6—6.9 kgf·m, 41—49 ft·lb)

REAR SHOCK ABSORBER INSPECTION
1. Inspect the rear shock absorber using the same procedure as the front shock absorber. (See 02–13–4 FRONT SHOCK ABSORBER INSPECTION.)

REAR SHOCK ABSORBER DISPOSAL
1. Dispose of the rear shock absorber using the same procedure as the front shock absorber. (See 02–13–4 FRONT SHOCK ABSORBER DISPOSAL.)
**REAR SUSPENSION**

**REAR STABILIZER REMOVAL/INSTALLATION**

1. Remove in the order indicated in the table.

<td>Rear stabilizer</td>
</tr>
</tbody>
</table>

2. Install in the reverse order of removal.

**Stabilizer Bushing and Bracket Installation Note**

1. Align the bushing with the positioning bushing on the stabilizer bar.
2. Temporarily install the stabilizer bracket so that the slot (or elongated hole) faces downward.
3. Tighten the stabilizer bracket nut, then bolt.

**STABILIZER CONTROL LINK (REAR) INSPECTION**

1. Inspect the rear stabilizer control link in the same procedure as the front stabilizer control link inspection. (See 02–13–8 STABILIZER CONTROL LINK (FRONT) INSPECTION.)
LATERAL LINK AND TRAILING LINK REMOVAL/INSTALLATION

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. Inspect the rear wheel alignment and adjust it as necessary.

Nut, Cam Plate and Adjusting Cam Bolt Removal Note

1. Before loosening the nut, make a mark on the cam plate and the crossmember for reference during installation.
REAR SUSPENSION

Front Lateral Link Removal Note
1. Support the rear crossmember using a jack, then remove the crossmember bolts.
2. Lower the crossmember to remove the lateral link bolt.

Nut, Cam Plate, and Adjusting Cam Bolt Installation Note
1. Install the cam plate so that the notch faces the same direction as the adjusting cam bolt.
2. Align with the mark made before removing the adjusting cam bolt.
3. Tighten the nut.

   Tightening torque
   50—69 N·m (5.1—7.1 kgf·m, 37—50 ft·lb)

REAR CROSSMEMBER REMOVAL/INSTALLATION
1. Remove the rear stabilizer. (See 02–14–4 REAR STABILIZER REMOVAL/INSTALLATION.)
2. Remove the front and rear lateral links. (See 02–14–5 LATERAL LINK AND TRAILING LINK REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Inspect the rear wheel alignment and adjust it as necessary.
